BMC Control-M Services

In order to realize business success, organizations must create a unified production environment using a business-integrated scheduling solution that can centrally and efficiently manage numerous diverse applications.

In addition, a business-integrated scheduler must be able to integrate additional applications into the environment quickly and smoothly, as well as enable communication with applications from external organizations. Only a business-integrated scheduling solution can tackle such versatile and critical business requirements.

Control-M is a business-integrated scheduling solution that addresses all the above needs as well as provides legacy support and rich scheduling capabilities. For years, Control-M has served organizations reliably as their core business application batch scheduler. Now, with its new and innovative architecture, Control-M is the optimal batch business-integration solution on the market.

Control-M is one of the first business- integrated scheduling solutions on the market, and it is improving all the time. Control-M can cost-effectively manage your batch flow across your entire enterprise – including ERP applications, advanced file transfer protocols, J2EE and Web Services. In addition, Control-M's Batch Impact Manager capability helps you prioritize your batch control. This allows you to manage what matters to directly impact your company's bottom line.

BMC Control-M Services
- Implementations
- Upgrades
- Integrations/Customizations

Control-M goes beyond supplying core- scheduling capabilities. Control-M integrates with your diverse systems environment to create a single, unified business process. Moreover, it offers a focal point of management for your entire business flow, enabling efficient problem detection and resolution.

Control-M Services

With solid experience in Control-M services, GSS Infotech has successfully completed a number of assignments. GSS Infotech has Control-M consultants, with extensive knowledge in Control-M implementation, upgrades and optimization.

Enterprise Job Scheduling

GSS Infotech's Control-M services orchestrate and optimize heterogeneous operations management processes that span your enterprise. Our services provide proactive management and automation that:

- Ensure stability of critical processes running across multiple applications and platforms, including FTP processes, ERP servers, J2EE, Web services, and JMS servers

- Improve your ROI, reduce risk, staff costs and workloads, by eliminating manual processes, centralizing control, increasing productivity, and automating recovery

- Manage your heterogeneous platforms from a business service perspective through one management interface, including z/OS, Unix, Linux, Microsoft Windows, iSeries, Tandem, Unisys, and others

- Manage any application, including your resource planning, e-business, legacy, and custom applications

- Implement rapid problem detection, escalation, and resolution

- Automate and streamline the production flow

- Enable proactive management through dynamic event-based job scheduling

- Increase the efficiency of the existing IT infrastructure

- Satisfy regulatory requirements through the Reporting, Forecasting and Security features of Control-M
